Success Story

TeachPitch

Company Background
TeachPitch is a cloud-based learning platform that helps teachers and schools identify the best online resources available.

Challenges & Process

TeachPitch needed a educational software solution which was provided by us coming up with a platform that would help teachers and schools in finding the best online resources available. The challenge was, that no standard technology could offer what they needed. Therefore, the best way to approach to this was by designing and developing a teacher-curated library system from scratch. With tons of options, unique design and high-end features, together with TeachPitch we build client specific product using custom Laravel development. The technology used in developing this software included Laravel/php and JavaScript. With that in mind, the platform that we developed was more structured and scalable, feature-rich and effective for all users around the globe.

Results

TeachPitch now offers its users a teacher-curated library system accessible through a community technology. The platform allows you to see, save, rate and share the most relevant digitally available educational resources while discovering the personal learning ideas and questions from other teachers from around the world. The software is currently **being used in hundreds of schools** all over the world **featuring 54013+ Educators from 200+ countries.**

TeachPitch

Aldo de Pape, CEO, Founder, TeachPitch

"This team delivers above and beyond. We have been working with their developers and designers for over 7 years and are highly enjoying their friendly, timely and professional approach to everything that comes our way. They know how to deliver at scale while keeping a keen eye on time and detail. The team has proven to be very open and flexible matching the needs of our clients from all over the world. I highly recommend them!"

Developers on Demand. Global resources. Easily deployed.
