

Things we implemented:

- Web service and cross-platform mobile apps

Technologies we used:

- jQuery, Isotope, PHP & GSAP

Success Story

Credins Bank

Company Background

Credins Bank is one of the three largest banks in Albania providing various banking products and customer services in over 58 branches all over the country.

Challenges & Process

Credins Bank was looking for a new and upgraded website in order to serve both as a means for corporate communication as well as providing their clients with a better customer experience. So, the challenge was to create a solution which delivers an intuitive and easy access user experience for both the employees and customers.

To achieve this, we created a easy to use website as well as a robust, fully scalable and secure cross-platform mobile application running on iOS and Android. We also analyzed performance data to optimize and refine the overall process. In the end, we were able to develop a top-quality product with features that are bundled in a user-friendly CMS.

Results

Credins Bank now offers its **over 39,000 users** a new and intuitive experience along with many other features, putting the Bank in their hands. Apart from the new and high performance website, Credins Event application through its vast features serves the communication and information of its employees.

Valbona Guri, Head of Marketing Department, Credins Bank

"I have the pleasure to express my satisfaction for the fruitful collaborations between Credins Bank and the team around codecombinator. We have been working with their developers and designers for a long time now where they have provided website and app development for the bank. Referring to the above services we recommend the team as a professional supplier for the development of websites, web portals and mobile applications."

Developers on Demand. Global resources. Easily deployed.
